Learning Objectives	The Bachelor's Degree in Business Administration and Economics aims to provide	
	students with a solid basic preparation in the business and economic,	
	mathematical-statistical and legal disciplines, aimed at understanding the	
	problems of business management and the functioning of modern economic and	
	financial systems in the current national and international political-economic	
	scenario.	
	The course of study is aimed at training professionals in the area of economics	
	and business management.	
	The inclusion of certain basic and characterizing activities lend themselves to	
	outlining a common path of knowledge for the training of graduates capable of:	
	Dealing with the main problems of business management in a national and	
	international scenario;	
	Undertake managerial, entrepreneurial or freelance responsibilities;	
	Analyze the issues of financial innovation, with regard to the problems of	
	corporate governance and capital market action;	
	Dealing with issues related to economic development, including in connection	
	with the environment and the territory;	
	Understand the dynamics of institutional actors, such as firms and markets,	

	within which such issues may occur; Address all issues related to sustainable development and, specifically, those pertaining to energy and eco-friendly business management.
Course prerequisites	Basic knowledge of business administration

Teaching strategies	Lectures, slides, exercises, display of practical cases
Expected learning outcomes in	
terms of	
Knowledge and understanding on:	The course in Planning and Control aims to provide students with knowledge related to the set of processes and methodologies for the collection, processing, and representation of quantitative-monetary, preventive and final, accounting and extra-accounting data useful to management in the performance of its economic governance function. The course aims at the student's understanding of the most recent models of economic analysis based on the economic concept of stakeholder value and the tools of economic governance specifically referable to new forms of organization of economic activity, the ability to assess the legitimacy of its work, and to provide the necessary tools aimed at solving specific problemsxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
Applying knowledge and understanding on:	The student at the end of the program will be able to apply the acquired knowledge by independently developing directional control models.xxxxxxxxxx
Soft skills	The student, by the end of the course, will have acquired the ability to use appropriate technical language necessary to address and fill managerial and consultant roles within companies. The student should be able to elaborate on the concepts learned, comparing them with evolving business practice. The student will make the technical concepts learned their own, developing their own level of analysis of the managerial aspects related to the economic-financial planning of management and reporting systems for the control and evaluation of results and managerial performance. <i>Making informed judgments and choices</i>
Syllabus	
Content knowledge	 The nature and purpose of accounting systems The nature of managerial accounting The classification of costs according to their behavior Direct and variable cost measurement systems and the conditions of operational risk: break-even-analysis Full costs and their use and the cost center system Activity-based costing. The measurement of product costs in different production contexts: contract manufacturing and continuous flow processes The analysis of production cost variances and the context of directional control Strategic planning and budget development economic control and the role of the budget: organizational aspects Investment decisions and capital budgeting Reporting for measuring business performance Short-term decisions between different alternatives
Texts and readings	Arcari A., Programmazione e Controllo, Mc-Graw-Hill, 2023
Notes, additional materials	Slides and practice worksheets
Repository	

Assessment	

Assessment methods	Written test (open-ended questions, true or false, multiple choice and exercises). Simulations of the assessment test will be held at the end of the course. The maximum duration to answer the tests is 1 hour.	
Assessment criteria	Subject of assessment will be the student's use of appropriate technical language necessary to fill managerial and consultant roles within companies. The student will have to demonstrate the ability to elaborate the concepts learned, contextualizing them and comparing them with different market situations. In the evaluation, particular emphasis will be given to the student's ability to make the technical concepts learned their own and to develop their level of analysis of the managerial aspects related to the economic-financial planning of management and reporting systems for the control and evaluation of results and managerial performance.	
Final exam and grading criteria	The final grade is given in thirtieths. The exam is considered passed when the grade is greater than or equal to 18. A different score is given for each type of question included in the test (i.e. true/false= 0.5; complex exercise= 6/8).
